REGULAR PAPERS
Sufficient Conditions for Convergent Recursive Extrapolation of qLPV Scheduling Parameters Along a Prediction Horizon ................................................................. M. M. Morato, J. E. Normey-Rico, and O. Sename 3182

A Piecewise Linear Regression and Classification Algorithm With Application to Learning and Model Predictive Control of Hybrid Systems................................................................. A. Bemporad 3194

Global Stabilizability Theorems on Discrete-Time Nonlinear Uncertain Systems ................................................................. Z. Liu and C. Li 3226

Stochastic Programming Using Expected Value Bounds ................................................................. R. Chinchilla and J. P. Hespanha 3241

Optimal Dynamic Mechanism Design With Stochastic Supply and Flexible Consumers ................................................................. S. Navabi and A. Nayeri 3257

Finite-Sample Analysis of Two-Time-Scale Natural Actor–Critic Algorithm ................................................................. S. Khodadadian, T. T. Doan, J. Romberg, and S. T. Maguluri 3273

Deep Filtering With Adaptive Learning Rates ................................................................. H. Qian, G. Yin, and Q. Zhang 3285

Watermark-Based Proactive Defense Strategy Design for Cyber-Physical Systems With Unknown-but-Bounded Noises ................................................................. H. Liu, Y. Li, Q.-L. Han, and T. Raïssi 3300

Inaccuracy Matters: Accounting for Solution Accuracy in Event-Triggered Nonlinear Model Predictive Control ................................................................. O. J. Faqir and E. C. Kerrigan 3316

Practical Learning–Tracking Framework Under Unknown Nonrepetitive Channel Randomness ................................................................. D. Shen 3331

Filippov’s Solution and Finite-Time Stability of Stochastic Systems for Discontinuous Control ................................................................. S. Chen, T. Li, Q. Zang, and Y. Liu 3348

Inference in Opinion Dynamics Under Social Pressure ................................................................. A. Jadilhaie, A. Makur, E. Mossel, and R. Salhab 3377

Anytime Proximity Moving Horizon Estimation: Stability and Regret ................................................................. M. Gharbi, B. Gharesifard, and C. Ebenbauer 3393

Reactive Symbolic Planning and Control in Dynamic Adversarial Environments ................................................................. L. Shamgah, T. G. Tadewos, A. A. R. Newaz, A. Karimoddini, and A. C. Estev ile 3409

Synchronization of Frequency-Modulated Multiagent Systems ................................................................. Z. Chen 3425

Synthesis of the Supremal Covert Attacker Against Unknown Supervisors by Using Observations ................................................................. R. Tai, L. Lin, Y. Zhu, and R. Su 3453

Nonparameteric Event-Triggered Learning With Applications to Adaptive Model Predictive Control ................................................................. K. Zheng, D. Shi, Y. Shi, and J. Wang 3469

(Contents Continued on Page 3181)
Equivariant Filter (EqF) .......................................................................................................................... P. van Goor, T. Hamel, and R. Mahony
Identification of Diffusively Coupled Linear Networks Through Structured Polynomial Models .............................................. E. M. M. Kivits and P. M. J. Van den Hof
Maximally Permissive Supervisors for Nonblocking Similarity Control of Nondeterministic Discrete-Event Systems ................................................................. J. Li and S. Takai
Receding Horizon Control With Online Barrier Function Design Under Signal Temporal Logic Specifications ........................................... M. Charitidou and D. V. Dimarogonas
Smother Entropy for Active State Trajectory Estimation and Obfuscation in POMDPs .................................................. T. L. Molloy and G. N. Nair 3573

TECHNICAL NOTES

Computation of Input Disturbance Sets for Constrained Output Reachability .......................................................................................... S. K. Mulagaleti, A. Bemporad, and M. Zanon 3587
Rendezvous Control Design for the Generalized Cucker–Smale Model on Riemannian Manifolds ........................................ X. Li, Y. Wu, and J. Zhu
Finite-Horizon $H_\infty$ Filtering via a High-Rate Network With the FlexRay Protocol .................................................. S. Liu, Z. Wang, L. Wang, and G. Wei
Strong Left Inversion of Linear Systems and Input Reconstruction .......................................................... M. Di Loreto and D. Eberard
Approximate Optimal Trajectory Tracking With Sparse Bellman Error Extrapolation .......................................................... M. L. Greene, P. Deptula, S. Nivison, and W. E. Dixon
Distributed Gradient Tracking for Unbalanced Optimization With Different Constraint Sets ................................................ S. Cheng, S. Liang, Y. Fan, and Y. Hong
Value of Information in Feedback Control: Global Optimality .......................................................... T. Soleymani, J. S. Baras, S. Hirche, and K. H. Johansson
Nonlinear PI"D"-Type Control of Flexible Joint Robots by Using Motor Position Measurements Is Globally Asymptotically Stable .......................................................... J. Moyrón, J. Moreno–Valenzuela, and J. Sandoval
Decentralized Circular Formation Control of Nonholonomic Mobile Robots Under a Directed Sensor Graph ........................................ X. Yu and R. Su
Prescribed-Time Tracking Control of MIMO Nonlinear Systems With Nonvanishing Uncertainties ................................................ H. Ye and Y. Song
An Online Kullback–Leibler Divergence-Based Stealthy Attack Against Cyber-Physical Systems ................................................ Q. Zhang, K. Liu, A. M. H. Teixeira, Y. Li, S. Chai, and Y. Xia
Designing Distributed Impulsive Controller for Networked Singularly Perturbed Systems .......................................................... W. He, K. Liang, F. Qian, and G. Chen
To Filter or Not to Filter? Impact on Stability of Delay-Difference and Neutral Equations With Multiple Delays ............................................... W. Michiels
Discrete-Time Switching Systems as Difference Inclusions: Deducing Converse Lyapunov Results for the Former From Those for the Latter .................................................. R. Goebel
Nonminimality of the Realizations and Possessing State Matrices With Integer Elements in Linear Discrete-Time Controllers ................................................. M. S. Tavazoei
Optimal Tracking for Periodic Linear Hybrid Systems .......................................................................................... C. Possiert
Concurrent Receding Horizon Control and Estimation Against Stealthy Attacks .......................................................... F. Fotiadis and K. G. Vamvoudakis
Distributed Online Aggregative Optimization for Dynamic Multirobot Coordination .......................................................... G. Carnevale, A. Camisa, and G. Notarstefano

Faster Consensus via a Sparser Controller, L. Ballotta and V. Gupta ................................... pp. 1459-1464
On Global Output Tracking Control of Lotka-Volterra Systems, V. Badri ........................................ pp. 1465-1469
Toward Minimal Data Rate Enforcing Regular Safety Properties: An Invariance Entropy Approach, M. S. Tomar and M. Zamani ........................................................................................................ pp. 1476-1481
Multi-Agent Active Learning for Distributed Black-Box Optimization, L. Cannelli, M. Zhu, F. Farina, A. Bemporad and D. Piga ........................................................................................................ pp. 1488-1493
Distributionally Robust Optimization With Noisy Data for Discrete Uncertainties Using Total Variation Distance, F. Farokhi ........................................................................................................ pp. 1494-1499
Comparison of the Guaranteed State Estimator and the Zonotopic Kalman Filter for Linear Time-Variant Systems, L. Orihuela ........................................................................................................ pp. 1512-1517
Removing Two Fundamental Assumptions in Verifying Strong Periodic (D-)Detectability of Discrete-Event Systems, K. Zhang ........................................................................................................ pp. 1518-1523
Perception-Aware Trajectory Planning for a Pair of Unicycle-Like Robots With Absolute and Relative Ranging Measurements, F. Riz, L. Palopoli and D. Fontanelli ........................................................................................................ pp. 1530-1535
Variational Principles for Mirror Descent and Mirror Langevin Dynamics, B. Tzen, A. Raj, M. Raginsky and F. Bach ........................................................................................................ pp. 1542-1547
A Novel Finite Difference-Based Model Reduction and a Sensor Design for a Multilayer Smart Beam With Arbitrary Number of Layers, A. K. Aydin, A. Ö. Özer and J. Waltermann ........................................................................................................ pp. 1548-1553
Bearing-Based Formation Maneuver Control of Leader-Follower Multi-Agent Systems, H. Su, Z. Yang, S. Zhu and C. Chen ........................................................................................................ pp. 1554-1559
Input Set Design for Active Fault Diagnosis and Control, F. Xu ........................................................................................................ pp. 1560-1565
Semicontraction and Synchronization of Kuramoto–Sakaguchi Oscillator Networks, R. Delabays and F. Bullo ........................................................................................................ pp. 1566-1571
Robust Collision Avoidance for Mobile Robots in the Presence of Moving Obstacles, J. A. Ricardo and D. A. Santos .................................................................................................................................................................................. pp. 1584-1589
Existence and Completeness of Solutions to Extended Projected Dynamical Systems and Sector-Bounded Projection-Based Controllers, W. P. M. H. Heemels and A. Tanwani .......................................................................................................................... pp. 1590-1595

Special Section on Data-driven analysis and control
Guest Editors:
Kanat Camlibel, Groningen University, The Netherlands
Martin Guay, Queen's University, Canada
Sophie Tarbouriech, LAAS-CNRS, Toulouse, France
Guest Associate Editors
Simone Baldi, Southeast University, China
Timm Faulwasser, TU Dortmund, Germany
Francesco Ferrante, University of Perugia, Italy
Paolo Rapisarda, University of Southampton, U.K.
Henk J. Van Waarde, University of Groningen, The Netherlands
Melanie N. Zeilinger, ETH, Switzerland

Guest Editorial Introduction to the IEEE Control Systems Letters Special Section on Data-Driven Analysis and Control, K. Camlibel et al. .......................................................................................................................... pp. 1596-1597
Minimum-Variance and Low-Complexity Data-Driven Probabilistic Safe Control Design, H. Modares .................................................................................................................................................................................. pp. 1598-1603
Reinforcement Learning for Non-Deterministic Transition Systems With an Application to Symbolic Control, A. Borri and C. Possieri .................................................................................................................................................................................. pp. 1610-1615
Data-Driven Design of Explicit Predictive Controllers With Structural Priors, V. Breschi, A. Sassella and S. Formentin .................................................................................................................................................................................. pp. 1616-1621
DRIP: Domain Refinement Iteration With Polytopes for Backward Reachability Analysis of Neural Feedback Loops, M. Everett, R. Bunel and S. Omidshafiei .................................................................................................................................................................................. pp. 1622-1627
Practical Stabilization of Switched Affine Systems: Model and Data-Driven Conditions, A. Seuret, C. Albea and F. Gordillo .................................................................................................................................................................................. pp. 1628-1633
Certifiably Robust Neural ODE With Learning-Based Barrier Function, R. Yang, R. Jia, X. Zhang and M. Jin .................................................................................................................................................................................. pp. 1634-1639
Data-Driven Stabilization of Input-Saturated Systems, V. Breschi, L. Zaccarian and S. Formentin .................................................................................................................................................................................. pp. 1640-1645
A Data-Driven Approach to the $L_2$ Stabilization of Linear Systems Subject to Input Saturations, A. Seuret and S. Tarbouriech .................................................................................................................................................................................. pp. 1646-1651
28 Soft Robotics
An introduction to the special issue
HELMUT HAUSER

30 Model-Based Control of Soft Robots
A survey of the state of the art and open challenges
COSIMO DELLA SANTINA, CHRISTIAN DURIEZ, and DANIELA RUS

66 Fractional Order Control of Continuum Soft Robots
Combining decoupled/reduced-dynamics models and robust fractional order controllers for complex soft robot motions
CONCEPCIÓN A. MONJE, BASTIAN DEUTSCHMANN, JORGE MUÑOZ, CHRISTIAN OTT, and CARLOS BALAGUER

100 Learning-Based Control Strategies for Soft Robots
Theory, achievements, and future challenges
CECILIA LASCHI, THOMAS GEORGE THURUTHEL, FUMIYA LIDA, ROCCHI MERZOUKI, and EGIDIO FALOTICO

114 Leveraging Morphological Computation for Controlling Soft Robots
Learning from nature to control soft robots
HELMUT HAUSER, THRISHANTHA NANTAYAKARA, and FULVIO FORNI
As the official means of communication for the IEEE Control Systems Society, IEEE Control Systems publishes interesting, useful, and informative material on all aspects of control system technology for the benefit of control educators, practitioners, and researchers. With this mission statement in mind, IEEE Control Systems encourages submissions, both feature articles and columns, on all aspects of control system technology.

**SUBMISSION OF MANUSCRIPTS:** A feature article typically provides an in-depth treatment of either an application of control technology, a tutorial on some area of control theory, or an innovation in control education.

IEEE Control Systems publishes a variety of columns. “Applications of Control” columns are industrially oriented summaries of innovations in control technology. “Focus on Education” typically describes some aspect of education such as novel control experiments. “Lecture Notes” can be theoretical in nature as long as they have clear tutorial value and intent. See recent issues for examples of these and other types of columns. Authors are encouraged to contact the editor-in-chief about the suitability of potential columns.

A detailed Author’s Guide, a sample formatted manuscript, and LATEX template can be found at http://ieeecss.org/publication/ieee-control-systems-magazine. The specifications in this guide should be followed by all submissions.

All manuscripts should be submitted electronically to the IEEE Control Systems website, https://css.paperplaza.net/conferences/scripts/start.pl, with inquiries on appropriateness of content e-mailed to r.sulpichre@eng.cam.ac.uk.

**SPECIAL ISSUES:** IEEE Control Systems encourages proposals for special issues. Proposers are encouraged to contact the editor-in-chief to discuss potential topics.

**BOOKS AND CONFERENCES:** Submit information about recently published books to the associate editor for book reviews. Submit information about past and future conferences to the corresponding editor for conferences.

**ADVERTISING:** IEEE Control Systems accepts advertising for educational products, books, software, conferences, employment, and control-related technology. For information about advertising, contact Mark David, m.david@ieee.org, +1 732 465 6473.

IEEE CONTROL SYSTEMS—ISSN 1066-033X (ISMAD7) is published bimonthly by The Institute of Electrical and Electronics Engineers, Inc. Headquarters: 3 Park Avenue, 17th Floor, New York, NY 10016, U.S.A. +1 212 419 7900. Responsibility for the contents rests upon the authors and not upon the IEEE, the Society, or its members. To order individual copies for members and nonmembers, please e-mail the IEEE Contact Center at contactcenter@ieee.org. Member and nonmember subscription prices available on request. Copyright and Reprint Permissions: Abstracting is permitted with credit to the source. Libraries are permitted to photocopy beyond the limits of the U.S. Copyright law for private use of patrons: 1) those post-1977 articles that carry a code at the bottom of the first page, provided the per-copy fee indicated in the code is paid through the Copyright Clearance Center, 222 Rosewood Drive, Danvers, MA 01923, U.S.A., and 2) pre-1978 articles without fee.
